

Intro to Inception

Agenda:

1. Understand what an Inception is.
2. Take a break.
3. Announcement of group projects.
4. Workshop running an inception of your own.

School of Tech

part of accenture 

Plan to succeed

Let's plan our inception

- Why run an inception?
 - Also called a discovery
- Who should be there?
- Set and send out an agenda.

Generation

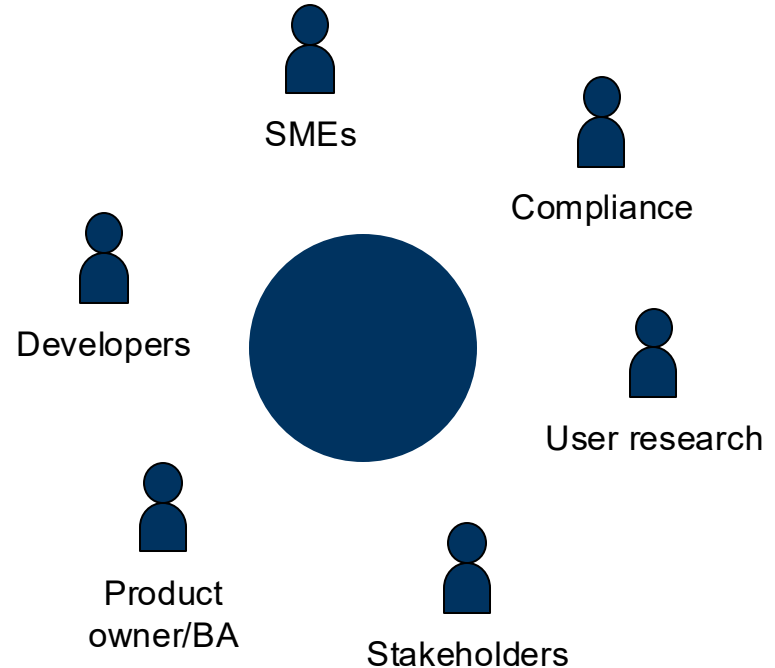

The team

Who should be there?

- Make sure you invite the right people.
- Enables stakeholder involvement in key decisions early.
- Start to build relationships with the immediate team.

Generation

Begin the day

As we mean to go on

- Run an meeting icebreaker.
- What is in inception/discovery?
- Why are we here?
- Work out what the problem is
 - Don't start with a solution.
- Outline the problem (idea sponsor).
- Introduce the agenda.

Generation

The problem:

There has been a significant shift to home working, we are a bricks and mortar retailer with no online presence. With all our stores being closed we need to diversify to maintain sales.

Agenda

1. Build an elevator pitch
2. Agree importance
3. Agree scope
4. Define the scope
5. Define success
6. The approach
7. The extended team
8. Breakdown the project
9. Estimation and risk
10. Epic roadmap

Elevator pitch

Let's all get on the same page

- Driven by the Product Owner / Idea Sponsor.
- Elevator Pitch presented to the whole team for buy in.
- Becomes the mantra for the project
- Any change to the pitch probably reflects a new project.

Generation

For *<our target customer>*
who *<statement of need or opportunity>*
the *<product/project name>*
is a *<product type>*
that *<key benefit/compelling reason to buy>*
unlike *<primary competitive alternative>*
our product *<describe product USP/primary differentiation>*

Elevator pitch

Let's all get on the same page

Example:

For *existing and new customers*

who *want to be able to shop online*

the *new online store*

is a *customer facing online shop*

that *allows customers to make purchases online*

unlike *the current physical stores*

our product *will allow customers to shop from the comfort of their own homes*

Generation

For *<our target customer>*

who *<statement of need or opportunity>*

the *<product/project name>*

is a *<product type>*

that *<key benefit/compelling reason to buy>*

unlike *<primary competitive alternative>*

our product *<describe product USP/primary differentiation>*

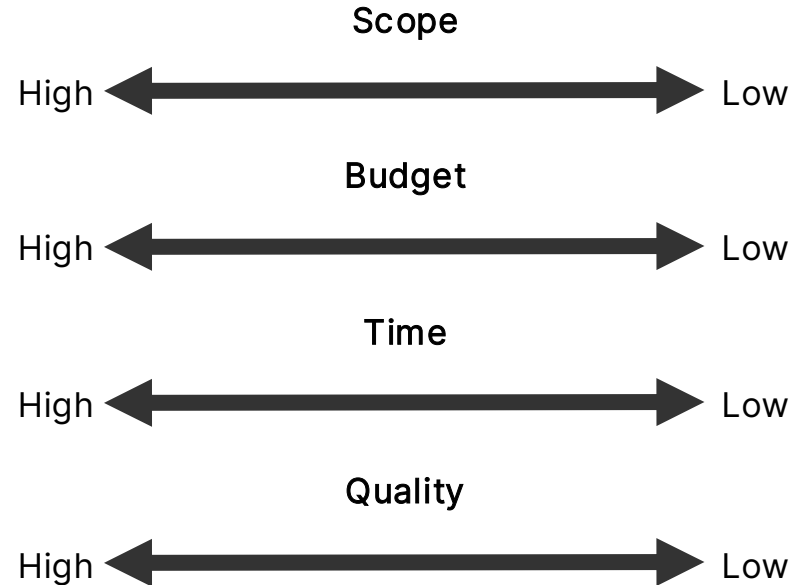

Agree importance

What can we flex to achieve success?

- Makes hard decisions easy later.
- Scope is what we will deliver.
- Budget is our ability to bring in new resource.
- Time is when we will deliver
 - We will probably need more budget.
- Quality means we could focus on happy path scenarios.

Generation

To achieve success, what can we flex?

Agree importance

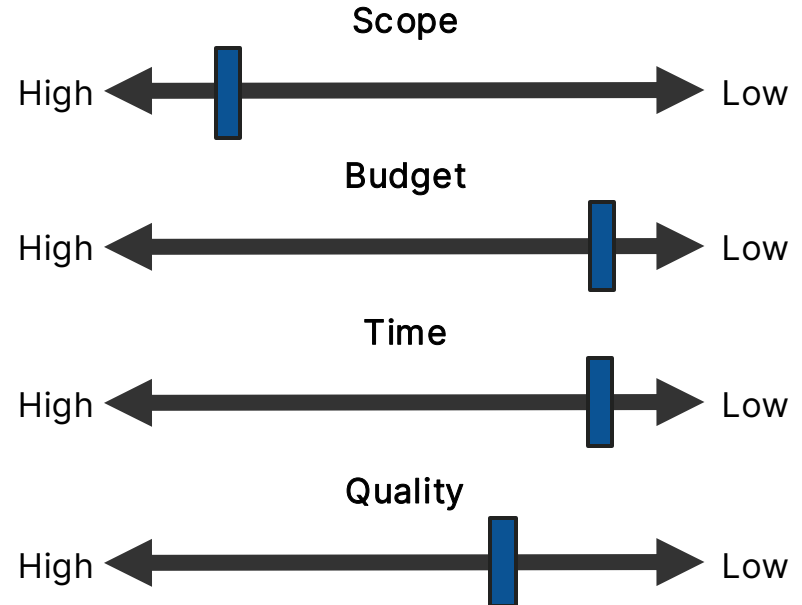

What can we flex to achieve success?

Example:

- Scope is great when it's highly flexible as its the easiest to flex.
- Budget can be flexed if extra squad members can join or if time can be increased.
- Time is sometimes hard to flex, especially if there are key dates.
- Quality can be flexed by focusing on happy paths etc.

Generation

To achieve success, what can we flex?

Outline the scope

What are we going to build?

- Delivers clear In / Out of scope.
- Driven by the needs of users, but linked to value.
- Agreed by the team.
- Usually takes the format of Themes / Epics (with some Stories, not sized).

Generation

MoSCoW prioritisation

M

Must Have Non negotiable product needs/features

S

Should Have Important features that are vital but not required

C

Could Have Nice to have things that will have a small impact if left out

W

Won't Have: Things that can be left out with little or no impact

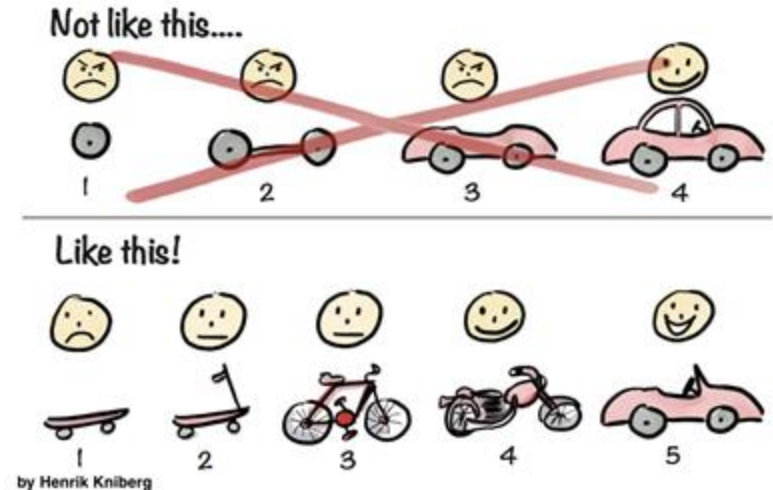

Outline the scope

Minimum viable product (MVP)

- Release a product to the market as quickly as possible.
- Test an idea with real users before committing a large budget to the product's full development.
- Learn what resonates with the company's target market and what doesn't.

Generation

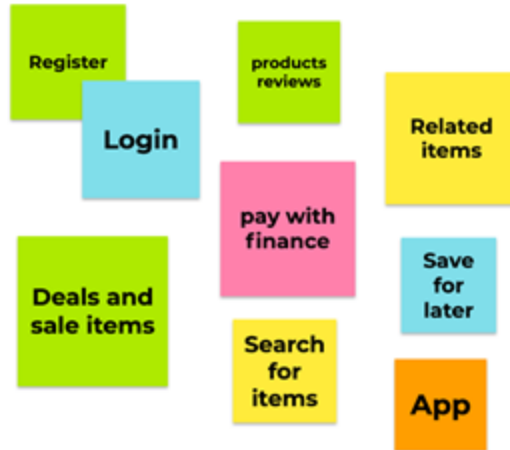

MoSCoW prioritisation

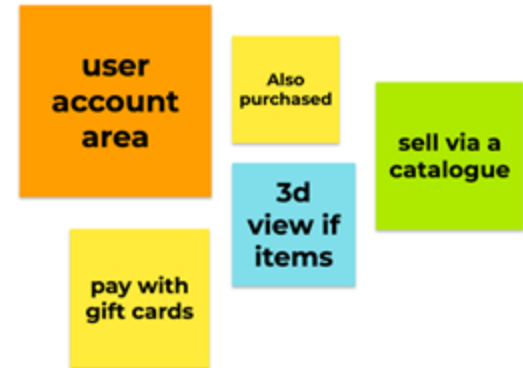

Must

Should

Could/Wont

Define success

What does success mean to us?

- Defines success for both the idea & the project delivery.
- Can link to existing business key performance indicators (KPIs).
- Metric change is recorded using S.M.A.R.T. technique.
- Priorities allow sacrifices to be made if necessary.

Generation

Specific *(simple, sensible, significant)*

Measurable *(meaningful, motivating)*

Achievable *(agreed, attainable)*

Relevant *(reasonable, realistic and resourced, results-based)*

Time bound *(time-based, time limited, timely, time-sensitive)*

Define success

What does success mean to us?

Example:

- Customer satisfaction on our online ordering will go from a 1 to a 3 out of 5 within the first 6 months of launch.
- Our first order will be successfully placed via the website on December 1st .
- We will achieve 10,000 unique online sales by the end of December.

Generation

Specific *(simple, sensible, significant)*

Measurable *(meaningful, motivating)*

Achievable *(agreed, attainable)*

Relevant *(reasonable, realistic and resourced, results-based)*

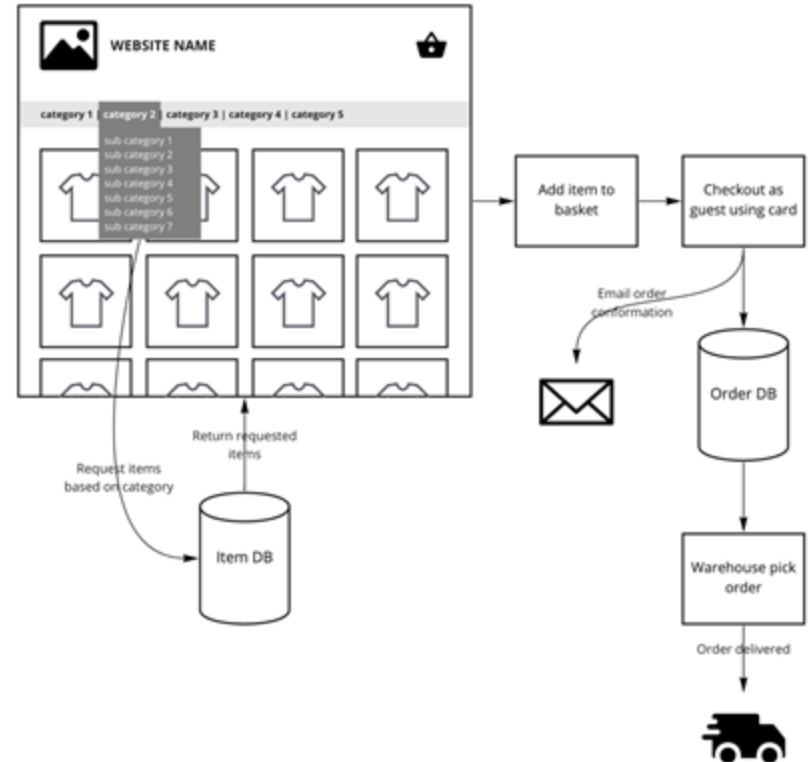

Time bound *(time-based, time limited, timely, time-sensitive)*

The approach

Who do we need to get this done?

- Represents likely approach - Not a fixed commitment to be signed off!
- Includes both **Technical** as well as **Non Technical** solutions (i.e. business architecture, wireframes, etc.)
- May change the requirements.

Generation

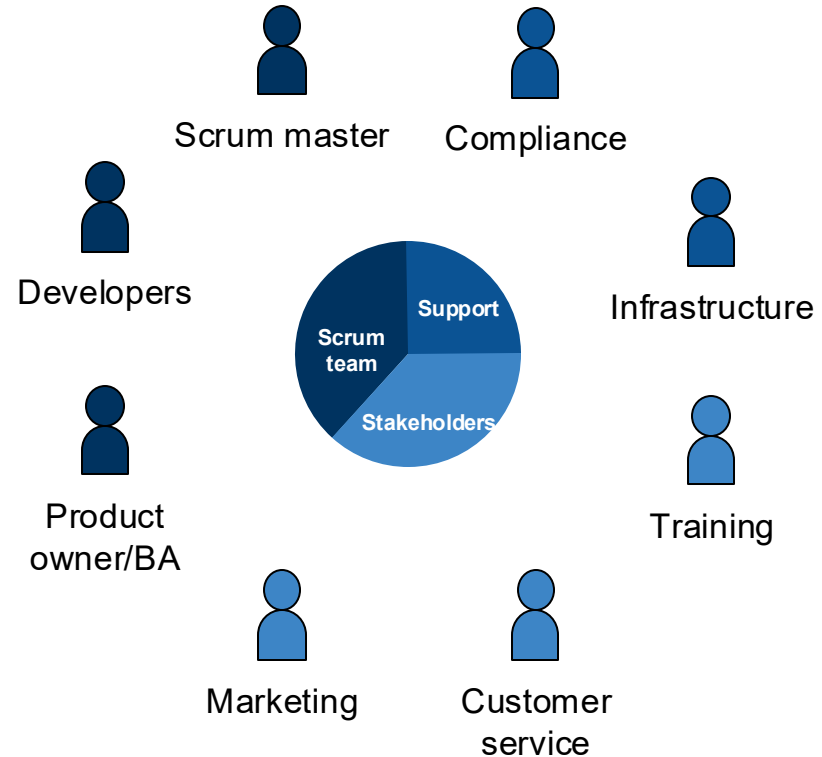

The extended team

Who should be involved?

- Includes Roles and Responsibilities.
- Allows more relationships to be built ahead of time.
- Enables stakeholder involvement in key decisions moving forward.
- May include people external to the organisation (i.e. customers).

Generation

Breakdown the project

How will we break this into slices?

- We can split our approach into Epics or themes outlining the MVP within them.
- We want to deliver vertical slices of value.
- To make sure we deliver usable value we want to make sure we build end to end.
- These Epics may well be different sizes, you won't always be developing a full slice.
- The vertical slices represent features or functionality adding user value at the end.
- The 80/20 rule, you can deliver 80% of the value doing 20% of the work.

Generation

Breakdown the project

How will we break this into slices?

- Each vertical slice can relate to an Epic.
- An epic is a deliverable piece of value.
- We can estimate Epics to help us plan delivery.
- We can set priority of Epics based on their value.

Generation

Store one item in DB

Display one item on site

Customer pays for one item

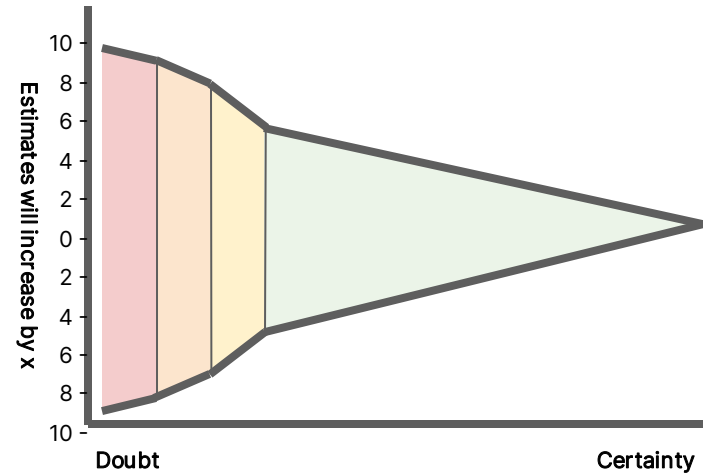

Order in warehouse

Estimation and risk

How to de risk the project

- Plan in risk early to de risk the project.
- By understanding requirements you become more certain.
- Doubt around requirements leads to increased estimates.
- Certainty means estimates are more accurate .
- Accurate estimates leads to a more accurate roadmap.

Generation

Roadmap

Let's call out any required dates

- Estimate epics at a high level and add them to an epic roadmap.
- A roadmap helps understand delivery timescales.
- Will allow the product owner to understand deliverables.
- Prioritise the must have features early
 - Making sure to prioritise the risks (!)
- Make sure your Must haves fit within your delivery time frame.
- Think about elapsed time rather than dates where you can.

Generation

MVP		
Month 1	Month 2	Month 3
Setup basic infrastructure	Be able to buy any item via the website (guest)	Support Beta roll out and test orders
Buy one item via new payment solution (!)	Categorise/filter to find a certain item	Buy an items related to an item I am on
		Buy an item as a logged in user

Introducing the client

SuperCafe

The Brief

We'll now show you the full project brief and give you a copy of it as a PDF

Project Teams

Group 1	Group 2	Group 3	Group 4	Group 5
Ahmet Dal	Dani Tirhas	Abdullah Alsobh	Hiyab Tewelde Gebretsadkan	Aso Abubakir (Ao)
Brendon Maphosa	Kimira Morgan	Anastasiia Marchenko	Mohammed Khayum Ali	Hadi Abidi
Keiron Pitter	Michael Castillo-Garcia	Azizfatima Hussain	Nikita Nerozin	Hasnain Tasadaque
Mohamed lamine Aboudaoud	Muhammad Rahman (Rahidur)	Yusuf Salad	Zoya Khan	Peter Gray
Pavan Kumar	Prajakta Bade			

Project Team Names

Decide your team names

One rule: The name must be related pun

Activity (10 mins, reconvene here)

*Split in groups and decide on your team names.
Team names must be related to the project themes,
and the more pun-tastic the better!*

Final project inception

Agenda

1. Build an elevator pitch
2. Agree importance
3. Agree scope
4. Define the scope
5. Define success
6. The approach
7. ~~The extended team~~
8. Breakdown the project
9. Estimation and risk
10. Epic roadmap

Elevator pitch

Let's all get on the same page

- Driven by the Product Owner / Idea Sponsor.
- Elevator Pitch presented to the whole team for buy in.
- Becomes the mantra for the project.
- Any change to the pitch probably reflects a new project.

Activity (10 mins, reconvene here)

Split into groups and develop an elevator pitch. Make a "Team Project" document or whiteboard and record your results.

Generation

For *<our target customer>*

who *<statement of need or opportunity>*

the *<product/project name>*

is a *<product type>*

that *<key benefit/compelling reason to buy>*

unlike *<primary competitive alternative>*

our product *<describe product USP/primary differentiation>*

Elevator pitch

Let's all get on the same page

- Show-and-tell - lets see what you all made!

Activity (5 mins, together)

Generation

For *<our target customer>*
who *<statement of need or opportunity>*
the *<product/project name>*
is a *<product type>*
that *<key benefit/compelling reason to buy>*

Agree importance

What can we flex to achieve success?

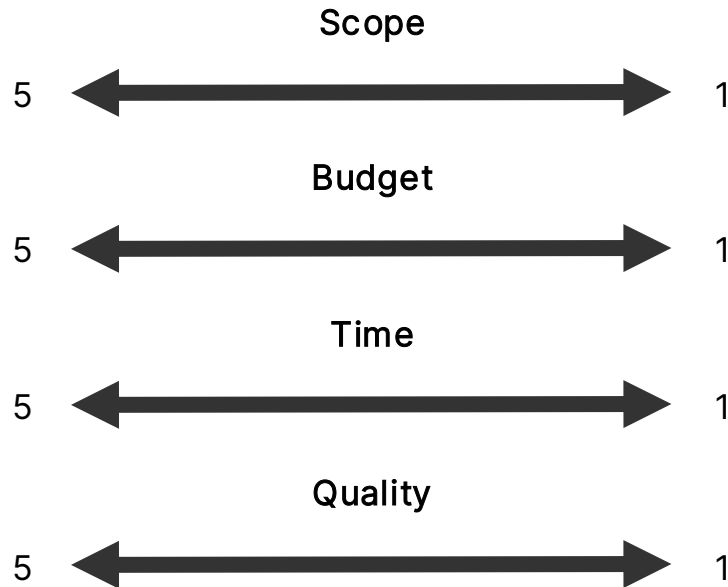

- Makes hard decisions easy later.
- Scope is what we will deliver.
- Budget is our ability to bring in new resource.
- Time is when we will deliver
 - We will probably need more budget.
- Quality means we could focus on happy path scenarios.

Activity (15 mins, reconvene here)

What can you flex in your project? Mark them on a scale of 1-5 (1 being low, 5 being high)

Generation

To achieve success, what can we flex?

Agree importance

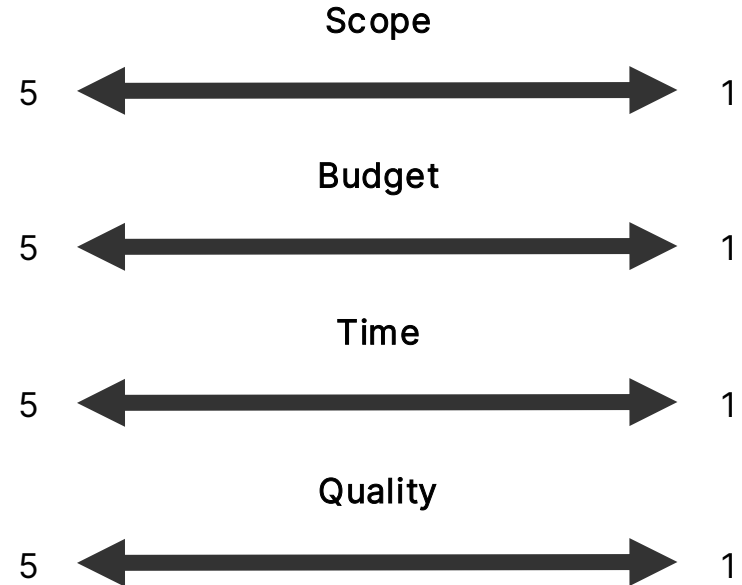

What can we flex to achieve success?

- Show-and-tell. Lets see what you all decided!

Activity (5 mins, together)

Generation

To achieve success, what can we flex?

Agreed scope

What are we going to build?

- Delivers clear In / Out of scope.
- Driven by the needs of users, but linked to value.
- Agreed by the team.
- Usually takes the format of Themes / Epics (with some Stories, not sized).

Activity (30 mins, reconvene here)

Thinking about the product brief we received, let's prioritise our features. Make a JamBoard or similar and group up some postits.

Generation

MoSCoW prioritisation

M

Must Have Non negotiable product needs/features

S

Should Have Important features that are vital but not required

C

Could Have Nice to have things that will have a small impact if left out

W

Won't Have: Things that can be left out with little or no impact

Agreed scope

What are we going to build?

- Show-and-tell. Let's summarise what we all put in (i.e. highlights only)

Activity (5 mins, together)

Time bound *(time-based, time limited, timely, time-sensitive)*

The approach

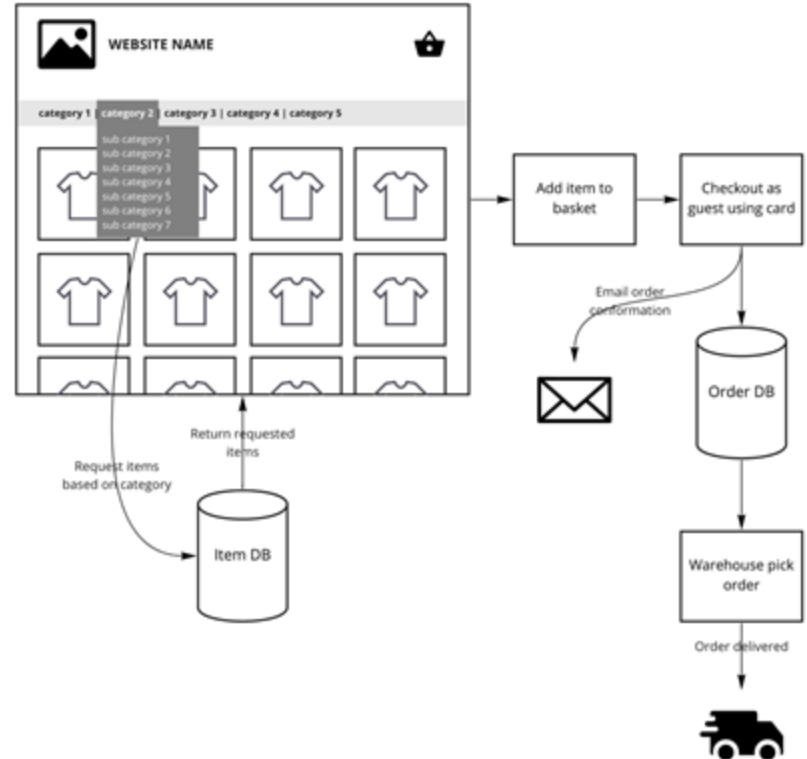

Who do we need to get this done?

- Represents likely approach - **Not a fixed commitment to be signed off!**
- Includes both Technical as well as Non Technical solutions (i.e. business architecture, wireframes, etc.)
- Things you discover may change the requirements.
- Do your best for now, and don't sweat over the exact details - you can iterate it later.

Activity (30 mins, reconvene here)

How are we going to do this? Lets whiteboard a solution and focus on a structure for now, the tech will come later

Generation

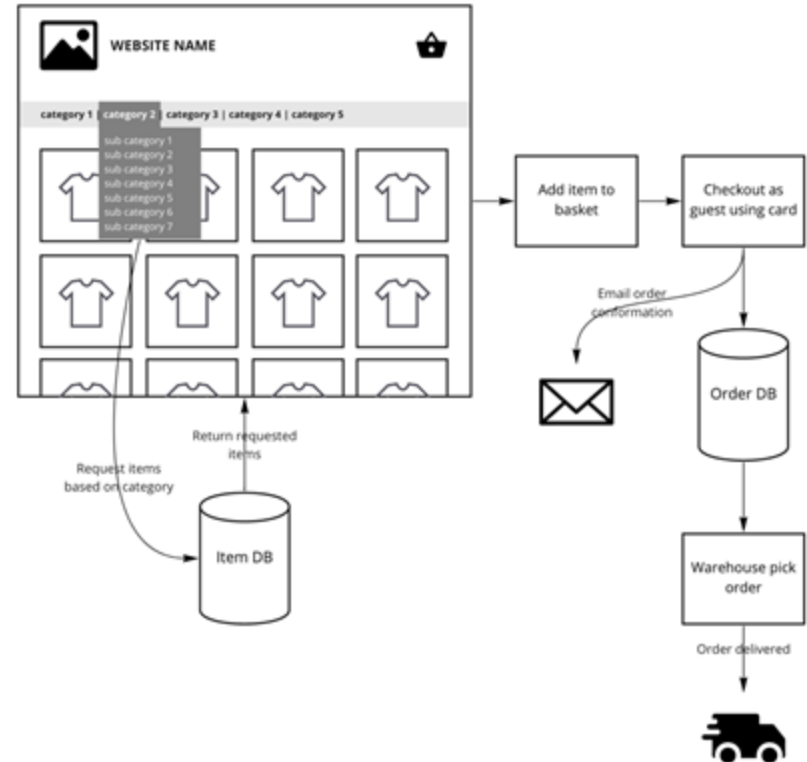

The approach

Who do we need to get this done?

- Show-and-tell. Give a high level summary of what each team came up with so far.

Activity (10 mins, together)

Generation

Let's do it!
